

Session 5

 25.11.20 | 13:00-14:00

Protecting your assets from erosive or corrosive deterioration

Extending plant life using rubber lining in wet and dry process applications

Ben will perform a deep dive into a mix of industrial scenarios in which REMA TIP TOP's extensive range of first-class products can help defend critical assets against the destructive forces of erosion and corrosion. With in-depth reviews of PERFORMANCELIN, REMALIN, UNILIN and CHEMOLIN this session will provide new insights into the tools available to protect assets in mineral processing and other discrete industries.

Presented by Ben Gatzlaff
Head of Product Management

Ben holds deep domain expertise in industrial settings around the world having spent the majority of his career based in Germany and also here in Australia. He has multiple years' experience in product management and was formerly the Global Product Manager for Heavy Wear Protection at REMA TIP TOP. Ben is not afraid of getting his hands dirty and is a solutions driven leader who focuses on the commercial and the practical application of specialist products to improve outcomes for his customers. Now based full time here in Australia, following a range of secondments over the past 3 years, Ben leads all aspects of product management for both Surface Protection and Material Processing for REMA TIP TOP in the Asia Pacific region.
